EDUCATION

Dr.N.G.P.Institute of Technology

B.E.Electronics and communication

2023 - 2027

R.V.S Bharath.Hr Secondary school, Ayakkaranpulam

2007 - 2023

80%

SKILL

- Basics of java
- c programming
- UI designing

LANGUAGE

- English
- Tamil

Expertise

- Team work & collaboration
- Communication & collaboration

ABOUT ME

I am an Electronics and Communication Engineering student with skills in both hardware and software design. I have experience in PCB design, Wireless Sensor Networks (WSN), and a basic understanding of IoT and Machine Learning. I enjoy working on projects that combine hardware circuits with software solutions and aim to build innovative systems using my technical knowledge. Additionally, I serve as the Joint Treasurer of the IETE Student Forum in my department, where I have collaborated with the Department Association to organize and coordinate events, strengthening my leadership, teamwork, and organizational skills.

PROJECTS

AUTOMATIC PLANT WATERING SYSTEM *2023-2024*

Designed and developed an IoT-based automatic plant watering system using Arduino and soil moisture sensors. Programmed the microcontroller to monitor soil moisture levels and automatically control a water pump. Implemented efficient water management to reduce wastage and ensure optimal plant growth. Tested and optimized the system for reliable, low-cost, and energy-efficient operation.

TRAFFIC MANAGEMENT SYSTEM: EMERGENCY VEHICLE *2024-2025*

Developed an intelligent traffic control system that gives priority to emergency vehicles like ambulances or fire trucks. When detected near an intersection, the system overrides normal traffic signals to provide a green light on its route, ensuring quick and uninterrupted passage.

SELF NAVIGATING LINE FOLLOWING DRONE FOR DEFENCE BORDER APPLICATION *2025-2026*

Designed and developed an autonomous drone capable of following predefined ground lines for border surveillance. Integrated image processing techniques and onboard sensors for real-time path detection and navigation. Implemented PID-based flight control for stable tracking and precise maneuvering. Focused on GPS-independent navigation to enhance reliability in sensitive defence environments.

ACTIVITIES

- Participated in PCB Design Workshop conducted at National Institute of Technology Calicut
- Participated in Smart India Hackathon 2025
- Participated in Inter-College Project Expo and presented project work

EXPERIENCE

Embedded Systems
Innovate Engineering Products

07-Jun-2025 21-jun-2025

- Built a solid base in MicroPython, Node.js, and designing systems based on microprocessors.
- Developed IoT applications that use sensors for rec ata collection and control systems. Set up cloud-based monitoring andcontrol with the Blynk IoT platform.
- Gained practical experience in embedded programming, sensor connections, and cloud-connected IoT systems.

Drone Technology

02-march-2026 8-march-2025

- *De Drone World Solutions Pvt. Ltd. Gained practical experience in UAV systems, including drone assembly, calibration, and flight testing.*
- *Worked with embedded systems to connect sensors like GPS, IMU, and ultrasonic.*
- *Implemented basic control algorithms such as PID. Developed and tested applications for autonomous navigation, obstacle detection, and real-time telemetry monitoring.*
